

25 March 2024

Dear Sir/Madam,

In reaction to the increased volatility of oil prices and to maintain the transport capacity and secure the highest service quality in the coming months, we are going to calculate Diesel Adjustment Factor (DAF) more frequently. The algorithm will stay unchanged.

| | |
|---|-----------|
| Source of data: | No change |
| https://energy.ec.europa.eu/data-and-analysis/weekly-oil-bulletin_en | |
| Diesel share: | No change |
| 30% (each change of Diesel price of +/-3% drives the change of Diesel floater by +/-0,9%) | |
| Neutral area: | No change |
| from minus 2,99% to plus 2,99% | |
| Base price: | No change |
| 1157,45 € / 1000 l [2020 annual average] | |
| Frequency of application: | Change |
| After each new release of diesel price in weekly oil bulletin. Average of three last quotations will be used to determine the current diesel price. Three-four working days after release an updated Diesel Adjustment Factor will be announced. | |

Last three published prices:
